

Probabilistic Well Integrity Assessment

Clément Joulin
Net-Zero Geosystems
October 2024

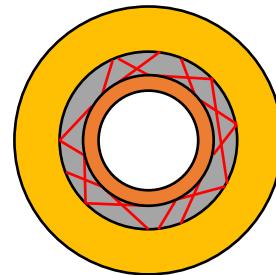

Net-Zero Geosystems is a company focused on the development of geoscientific simulation tools and services for CO₂ storage, geothermal energy, radioactive waste disposal, hydrogen storage (H₂, CH₄) and P&A.

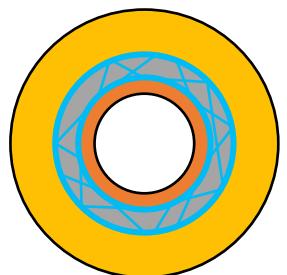

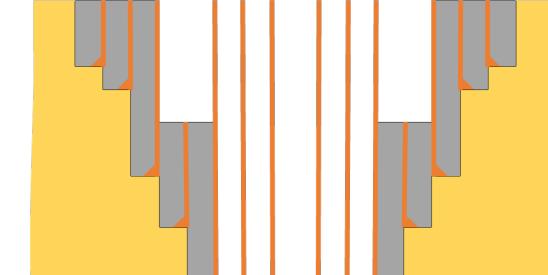

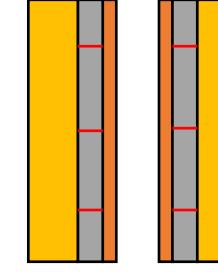

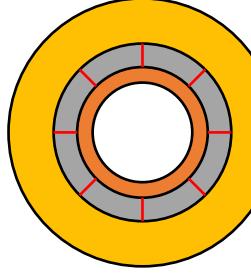

What do we predict?

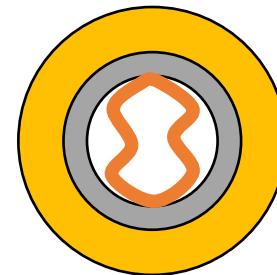

Debonding

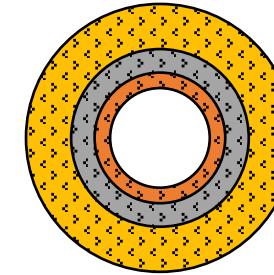

Fracturing

Leakages

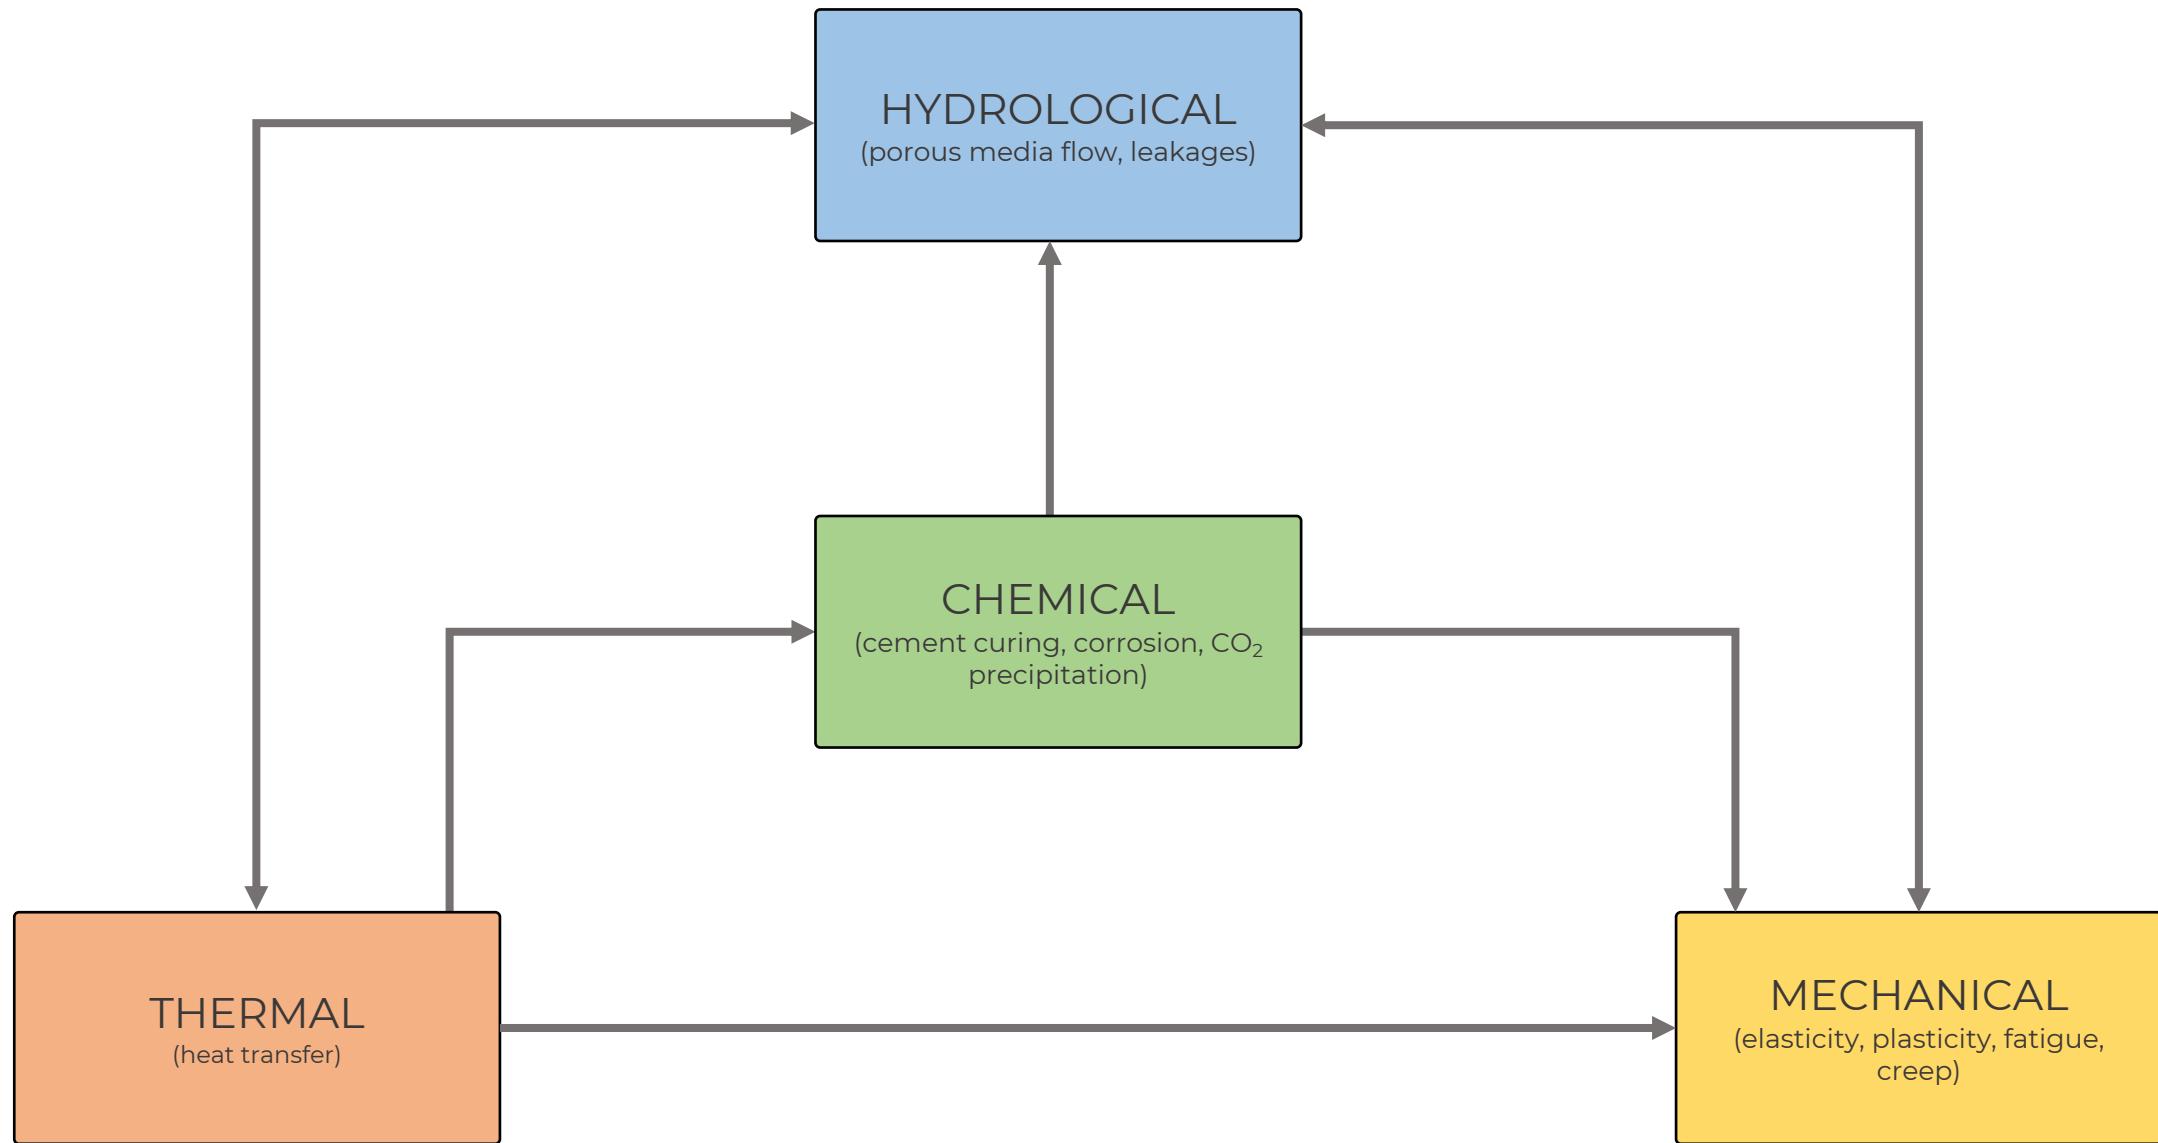

Casing collapse

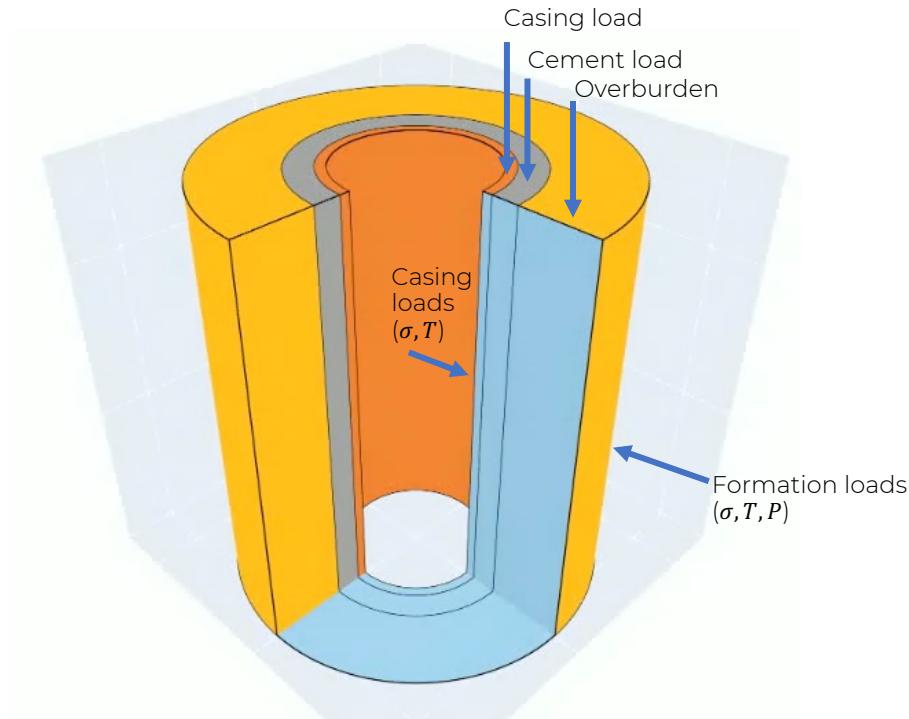

Chemical alterations

 Casing  Cement  Formation

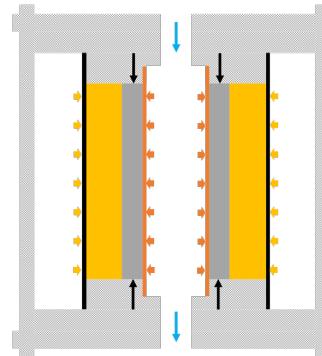

DRISCO: Well integrity simulator

- Developed in collaboration with TotalEnergies, Shell and Equinor
- Captures the behavior of a well section including:
 - Thermo-hydro-mechanical and chemical physics
 - Fracturing, debonding & micro-annuli, cement curing, plasticity, fatigue
- Takes <1s for simulating the life of the well

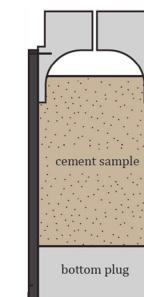

Validation vs. Experiments

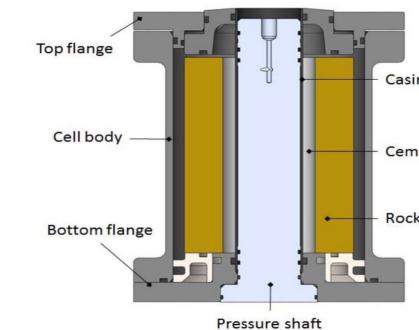

Models are being validated vs. experiments available in the literature and experiments of our partners TotalEnergies, Shell, Equinor and SINTEF.

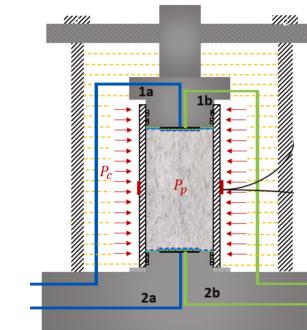

TotalEnergies' well integrity
experiment
(Joulin et. al 2022)

Shell's LabCat
(Wolterbeek et. al 2021)

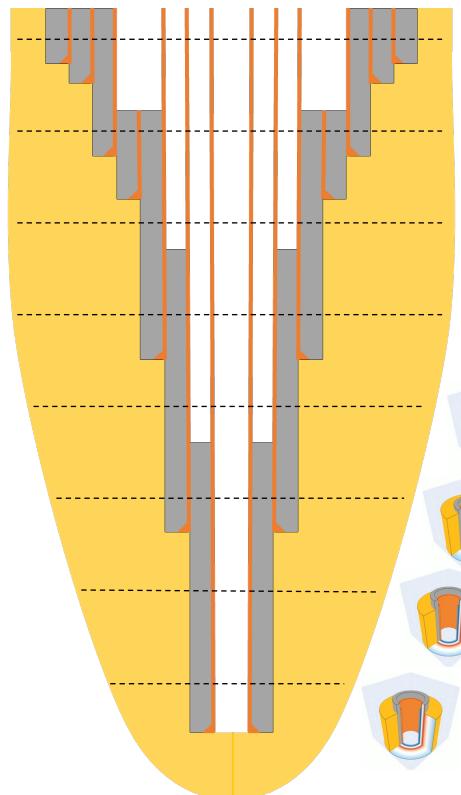

SINTEF P&T cycling cell
(Vrålstad et. al 2019)

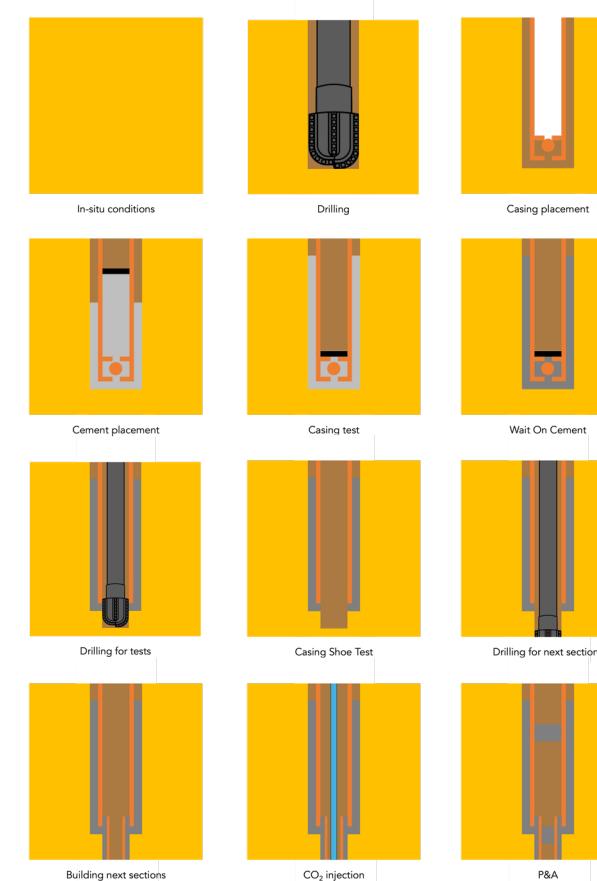

Los Alamos triaxial curing cell
(Meng et. al 2021)

Well integrity assessment

30-50 depths of interest

12+ Well life stages per section

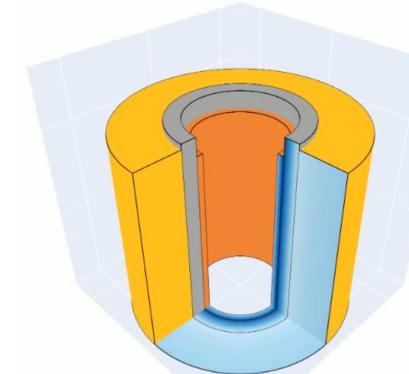

Cement-casing debonding	Cement-formation debonding
Cement-casing micro-annulus	Cement-formation micro-annulus
Cement-casing leakage rate	Cement-formation leakage rate
Casing collapse	Borehole breakouts
Cement plastic yield	Formation plastic yield

8+ Failure metrics

Challenges of prediction

Quantity	Casing	Cement	Formation
Δ	0.005	0.017	8.000
E	200.0	15.0	30.0
ν	0.27	0.25	0.49
ρ	7.9	2.3	2.7
β	1.3	0.9	1.0
k	45.2	6.2	4.9
$c^{(V)}$	3.4	4.0	1.6
ϕ	0.00	0.35	0.08
α	0.00	0.80	0.82
λ	0.00	0.15	30.00
C	250.0	22.6	16.0
ψ	0.0	15.0	42.0

Input set 1

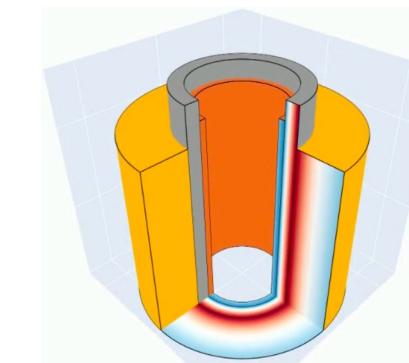

No debonding

Result 1

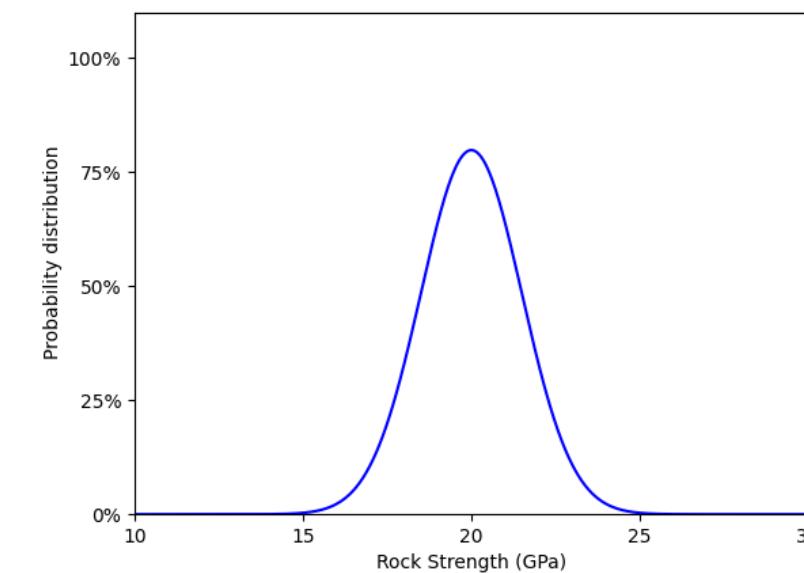

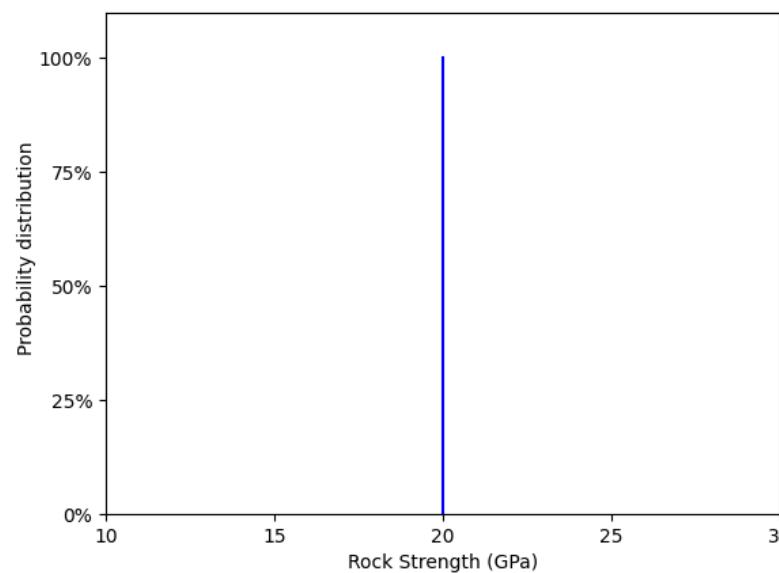

Quantity	Casing	Cement	Formation
Δ	0.005	0.017	8.000
E	200.0	16.0	28.0
ν	0.25	0.24	0.44
ρ	7.4	2.1	2.5
β	1.3	1.2	1.5
k	45.2	6.7	4.4
$c^{(V)}$	3.4	4.0	1.6
ϕ	0.00	0.34	0.07
α	0.00	0.80	0.82
λ	0.00	0.14	34.00
C	250.0	22.6	16.0
ψ	0.0	15.0	42.0

Input set 2

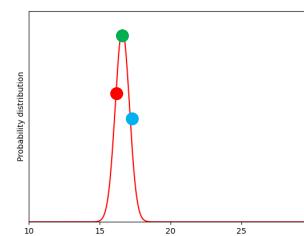

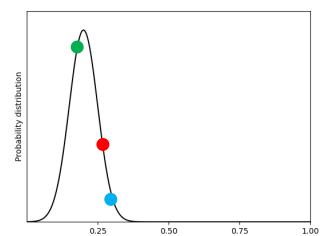

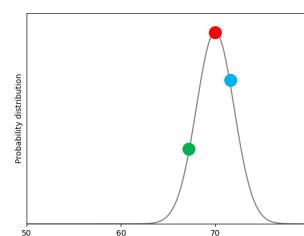

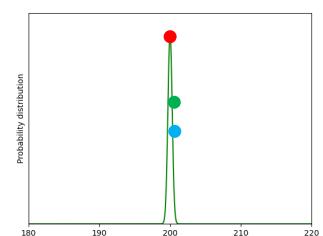

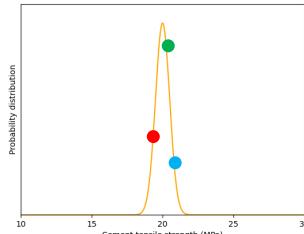

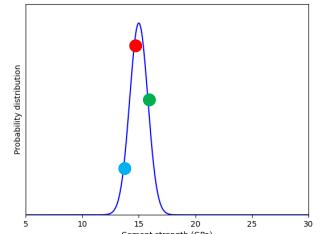

Debonding
